

State Farm® Growth Fund

as of September 30, 2020

Investment Strategy

Investment Objective:

Seeks long-term growth of capital, which may be supplemented by income.

Investment Strategy:

The Fund invests under normal circumstances at least 80% of its assets in common stocks and other income-producing equity securities. State Farm Investment Management Corp. (the "Manager"), investment advisor to the Fund, chooses stocks for the Fund's portfolio for their long-term potential to generate capital gains, but may also consider a stock's long-term potential to generate growth in income. Although there is no restriction on the size of the companies in which the Fund invests, ordinarily most of the Fund's investments are in companies with market capitalizations of at least \$1.5 billion.

In making investment decisions on specific securities, the Manager looks for companies with one or more of the following characteristics:

- Strong cash flow and a recurring revenue stream
- A strong industry position
- A strong financial position
- Strong management with a clearly defined strategy
- Capability to develop new or superior products or services

The Manager may sell securities the Fund holds for a variety of reasons, such as to secure gains, limit losses, or redeploy assets into more promising opportunities.

Who May Want to Invest:

Investors seeking long-term growth in capital.

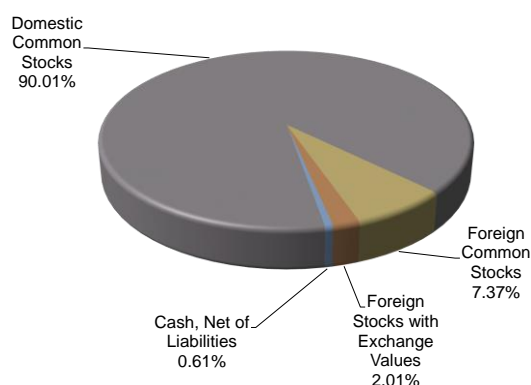

Portfolio Management:

Managed by State Farm Investment Management Corp., which has over 30 years experience managing investment company assets and is responsible for \$8.9 billion in assets (Associates' Funds Trust) as of September 30, 2020.

* These figures reflect the value of shares acquired through reinvestment of all dividends and of all capital gain distributions for the period. If sales charges were included, returns would be lower than indicated. The performance for other share classes will vary.

¹ The S&P 500® Index tracks the common stock performance of 500 large U.S. companies. The S&P 500® Index represents an unmanaged group of stocks that differs from the composition of the Growth Fund. Unlike an investment in the Growth Fund, a theoretical investment in the index does not reflect any expenses. It is not possible to invest directly in an index.

There is no assurance that the fund will achieve its investment objective. An investment should be made with an understanding of the risks that an investment in equity securities entails. These include the risk that the financial condition of the issuers of the securities in the portfolio, or the condition of the stock market in general, may decline. The fund may invest up to 20% of its assets in equity securities and depository receipts of foreign companies. Foreign investments involve greater risks than U.S. investments, including political and economic risks and the risk of currency fluctuations.
